

Hygiene hook

Contact-free, the whole day through

Hygiene hook

Avoid direct contact of the skin with frequently touched surfaces and minimise a potential risk of infection from viruses and bacteria.

Open and close doors

The hygiene hook can be used to open and close door handles and drawers, among other things.

Operate PIN pads

The rubber nub also accommodates operating small buttons on ATMs, time stamp machines and payment terminals.

Using Touch-screens

A large number of touch screens on deposit machines, cash machines and ticket machines can be operated with the rubber tip.

Lift Buttons

Select the desired floor without physical contact, using the rubber tip

Product characteristics

The hygiene hook is made of PP plastic, is extremely robust and has a long service life. Thanks to its soft, non-slip inner surface, the hygiene hook does not slip, even when used on hard surfaces.

Feature

A retractable holder comes with the hygiene hook so that it can be attached to jackets, bags, belts, and other objects by means of the metal clip, making it easy to integrate into daily activities.

Scope of delivery
