

Secure, controlled and customer-friendly - Entry and exit solutions

Entry and exit zones are among the most sensitive areas of high-traffic stores, especially those that use self-checkout concepts. This is the point that determines whether safety, efficiency and customer experience interact with one another or slow each other down. Wanzl meets these requirements with practical solutions that increase security, keep processes under control and make shopping convenient at the same time.

Loss prevention is an integral part of functioning store concepts, both in smart stores and in traditional food retail. The aim is to create controlled processes and minimise shrinkage without compromising on the shopping experience. The focus here is on modular loss prevention solutions that reliably protect checkout zones, relieve strain on store staff and can be seamlessly integrated into different store formats. Sensor-based technologies, intelligent release and authentication processes, and clear customer guidance systems ensure security remains effective but unobtrusive.

Modular solutions for different requirements

The [SlidingDoor](#) can be used flexibly as an entry, exit or combined access solution with two-way operation. It is particularly suited to self-checkout zones and impresses with its space-saving, open design. The [GalaxyPort Pro](#) also delivers visibility and control. High swivel arms create a physical barrier that deters potential thieves and reduces shrinkage without being intrusive. [Smart Exit](#) prevents uncontrolled exits from self-checkout zones in a fully automatic process. AI-powered sensors detect whether the payment process is complete and allow the customer to exit conveniently without scanning their receipt or dealing with additional check-out interfaces.

In addition, solutions such as the Smart Secure Cabinet enable sensitive or age-restricted products, such as premium spirits, to be displayed securely. Automated age checks and closed doors reduce the effort required of personnel while increasing security in the sales area. Access terminals with intuitive user guidance support authentication and approval processes, especially in outdoor settings. Various designs – wall mountings, rotatable holders or bases – allow for flexible placement.

Striking a balance between efficiency and customer friendliness

With its solutions, Wanzl demonstrates how security, cost-effectiveness and customer experience can be combined. Loss prevention thus becomes part of a holistic store concept that allows for secure self-checkout processes, supports personnel allocation and opens up new shopopportunities in retail.
